

Water-soluble or water-dispersible polymers comprising alkoxyLATED diallylamine derivatives

Abstract

5

Water-soluble or water-dispersible polymers comprising alkoxyLATED diallylamine derivatives, ethylenically unsaturated mono- or dicarboxylic acids, the anhydrides thereof or mixtures thereof and, if required, one or more further ethylenically unsaturated monomers C are prepared and are used as additives in mineral building materials, in de-

10 tergents or in cosmetic formulations.
